

## Test Strategy

### 1. Product, Revision and Overview

*Agify Is to site that you can type name and wait to guest a age by website*

### 2. Product History

### 3. Features to be tested

*List all features to be tested. Organize the list in the way that makes most sense-user features, or by level:*

<i>Web Application</i>

### 4. Features not to be tested

*Login test UI and API*

*Menus*

*Guest feature*

### 5. Configurations to be tested and excluded

*I recommend a table showing which hardware configurations will be tested with which software.*

### 6. Environmental requirements

*Postman*

*Playwright*

### 7. System test methodology.

*Exploratory testing*

### 8. System test entry and exit criteria

#### 8.1. Entry Criteria

*1. All basic functionality must work.*

#### 8.2. Exit Criteria

*Generic criteria:*

*1. All system tests executed (not passed, just executed).*

- *Automated tests in <Playwright>*
- *Test Strategy and SQA project plan*
- *Test procedure*
- *Test logs*
- *Bug-tracking system report of all issues raised during SQA process*
- *Test Coverage measurement*
